**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Amendment*

1. Acknowledgement is made of Amendment filed February 4, 2005.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-6, 8-16 and 18-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Magnus et al. (WO 02/082359; hereinafter “Magnus”).

Re claims 1-2, 5, 8-11, 13-14, 16, 18-21 and 23-24: Magnus teaches a method comprising:

printing a hardcopy representation (coupon 9 in fig. 2) of an electronic application on a paper having a printed pattern thereon (page 3, line 29 through page 4, line 10), the hardcopy representation having identification information to associate the hard copy representation with the electronic application, the identification information comprising an identification icon unique to the electronic application (“The coupons can, however, also be printed in and distributed by newspapers along with... Then it is possible to let the position-coding pattern be unique and identifiable to different newspaper publishers.” (see page 4, lines 4-6)), wherein the “the position-coding pattern be unique and identifiable to different newspaper publishers” serves as an identification icon unique to the electronic application;

recording one or more edits made with a pen on the hardcopy representation by recording movements of the pen with respect to the printed pattern (fig. 1; page 7, lines 16-34; page 9, line 16 through page 10, line 21); and

automatically sending the one or more edits made on the hardcopy representation, via wireless transmission, to a computer system (see figs. 2-3; page 7, line 15 through page 8, line 33; page 9, lines 16-35).

Re claims 3-4 and 15: Magnus teaches a method, wherein recording the information, such as winners, match results, number etc, comprises making a mark with the pen in the area/box with specific information (page 5, lines 1-3; page 8, lines 12-17; page 3, lines 8-17; page 5, lines 1-16).

Re claim 6 and 25: Magnus teaches a method, further comprising incorporating the one or more changes into the electronic version of the hardcopy representation automatically without end user intervention through the use of a pen/paper interface (page 7, lines 28-34).

Re claims 12 and 22: Magnus teaches locating position of the edits from camera images (“The camera communicates with a processor 5, in which the camera image is digitized and interpreted, and the image data is then stored in a memory 6” (see page 7, lines 25-28)).

#### *Response to Arguments*

4. Applicant's arguments with respect to claims 1-6, 8-16 and 18-25 have been considered but are moot in view of the new ground(s) of rejection.

5. In response to applicant's argument that “Claim 1 as amended sets forth “identification information to associate the hardcopy representation with the electronic application, the identification information comprising an identification (ID) icon unique to the electronic

application" (claim 1, emphasis added). In contrast, Magnus fails to disclose "the identification information comprising an identification (ID) icon unique to the electronic application" (page 7, 3<sup>rd</sup> paragraph) and "Magnus discloses only a position-coding pattern, which is not the same as the ID icon set forth in claim 1" (page 8, lines 3-4), the examiner respectfully submits that "the position-coding pattern be unique and identifiable to different newspaper publishers" is broadly interpreted as an identification icon unique to the electronic application.
